

Residential & Commercial Lighting

In Jacksonville ceiling fan installation is one of the most requested electrical services. In general, lighting installations will always be in demand. That is because from creating moods, to adding beauty to the interior and exterior of your home, or business, nothing works like lighting. However, choosing the right lighting can be a difficult task without professional help. From aesthetics, to voltage, to mounting techniques, the decisions are many.

American Electrical Contracting, Inc installs lighting of all types. We do not have a showroom or simply sell retail, however through our manufacturing partners we can fill practically every need by selling and installing your lights. We have provided a few links to some of the manufacturers that we work with. Unless noted on their web site, the manufacturers below are not set up for direct to the consumer sales. Because there are literally millions of lights to choose from we are sure these links will help. This page will continue to be updated.

When you find the light you need contact your American Electrical Contracting electrician for installation. For home use, if you purchase your lights from another source, no problem, we will do the installations for you. For commercial use, the same applies however, we prefer that you purchase the lights from us. In commercial applications there are many voltages, mounting options, light output issues, application issues and regulations. With so many variables our expertise can save you time, money and aggravation.

American Electrical Contracting has lighting to suit all of your needs. By selecting the links below you will be taken to various web sites that will assist you in your quest. Note the manufacturer and part number you would like to use and come back to us.

Lighting Controls

In addition to lighting, you may have a need for high tech and or energy management controls for your home and business. These intelligent systems can be configured to meet your needs.

We are certified to configure and install these systems providing a seamless link between classy lighting and controls. These smart systems can be configured to control many electronic and electrical devices from multiple locations including key pads, switches and hand held remote controls. For the ultimate in smart controls it's American Electrical Contracting, Inc.
